Description

The build dependencies page at: "<http://redmine.replicant.us/projects/replicant/wiki/BuildDependencies>" simply lists "openjdk". I got a make-error with openjdk-1.7.0's headers which was resolved by using openjdk-1.6.0's headers. Though I'm sure this is well known, the web-page should show this. Also, g++ ought to be listed in "Required Packages", correct?

History

#1 - 04/03/2012 09:53 AM - Paul Kocalkowski

- Status changed from New to Closed

- Resolution set to fixed

<http://redmine.replicant.us/projects/replicant/wiki/BuildDependencies#TrisquelUbuntuDebian> has: **openjdk-6-jre openjdk-6-jdk**
I added version 6 to openjdk on the list, because generally speaking, it works very well with openjdk 6 (and it's recommended by <http://source.android.com/source/initializing.html>)

About g++: we list **build-essential** which depends on make, gcc and g++ (among others).
