Resolution:	fixed	Grant:	
Device:	Galaxy S 3 (I9300)		

Description

Hi there,
when trying to sign my build, I got following error :

```
    signing: UserDictionaryProvider.apk      (
/home/debian/replicant/replicant-6.0/vendor/replicant-security/shared)
java.io.FileNotFoundException: /home/debian/replicant/replicant-6.0/vendor/replicant-security/shar
ed.x509.pem (No such file or directory)
    at java.io.FileInputStream.open0 (Native Method)
    at java.io.FileInputStream.open (FileInputStream.java:195)
    at java.io.FileInputStream.<init> (FileInputStream.java:138)
    at com.android.signapk.SignApk.readPublicKey (SignApk.java:160)
    at com.android.signapk.SignApk.main (SignApk.java:908)
```

```
ERROR: signapk.jar failed: return code 1
```

I probably made a mistake when answering questions, but it seems ./vendor/replicant/sign-build has only one parameter which is the device.

How can I clean before launch it again?

Thanks.

You can remove the keys with `rm -r vendor/replicant-security`.
