Description			

History

#1 - 06/13/2020 08:19 PM - Denis 'GNUtoo' Carikli

From Replicat IRC: [...] they have a mainline repo on github for the galaxy tab 10.1 which runs on a tegra20 but still has some components in common with the note 10.1. there are some patches in this repo which are not mainline yet but can be used for the note 10.1 too, for example the isa1200 motor, the headphone jack and parts of the extcon driver which seems to have the same undocumented gpio switching code inside
