Target version:	Any version	Spent time:	0.00 hour
Resolution:		Grant:	
Device:	New device	Type of work:	

Description

Support for this device was added in Cyanogenmod 9. If Replicant is upgrading their codebase anytime soon, this would be a welcome addition to the Replicant device family.

History

#1 - 09/06/2012 03:41 PM - Paul Kocialkowski

- Status changed from New to Rejected

Actually, it's not just that easy to have a device supported by Replicant: as we do not use any non-free blob, we have to replace most of them for each device.

That means that having CM work for this device into the Replicant codebase would only be the very first step of porting the device to Replicant.

As developers don't have this device, we're not going to add support for this device any time soon, even though we are hoping to switch our codebase to CM9 soon.

#2 - 09/10/2012 01:59 PM - Denis 'GNUtoo' Carikli

- Category set to 63

- Status changed from Rejected to New

- Assignee set to Denis 'GNUtoo' Carikli

- Target version set to Any version

None of the core developers have this device, so we can't do the port ourselves.

However we're happy to help you do the port, for instance by giving you lots of pointers trough IRC.

Denis.
