Description			

History

#1 - 09/14/2020 02:24 PM - Denis 'GNUtoo' Carikli

- Target version changed from Replicant 6.0 to Any version

We have 3 board drivers using smdk4x12:

- i9300
- n7100
- n5100

This currently works fine with Android as the name is set in Android.mk, which makes libsamsung-ipc select the right driver at runtime.

However this has several issues:

- It breaks when compiled with the autotools for GNU/Linux
- It prevents unified images in Replicant: with u-boot in the BOOT partition, we could support All the midas devices + the n5100 in the same image, but for that we'd need runtime detection.

#2 - 02/27/2021 10:05 AM - Denis 'GNUtoo' Carikli

- Device Galaxy Note 2 (GT-N7100) added

#3 - 03/29/2021 03:51 PM - Denis 'GNUtoo' Carikli

- Type of work C programming added
