Target version:		Spent time:	0.00 hour
Hosting infrastructure:			
Description			
<p>Onion services allow Tor users to access resources such as websites without ever leaving the Tor network, i.e. without having their traffic exposed to the clearnet and routed through an exit node. This has several privacy and security advantages.</p>			
<p>Replicant should have onion services for all it's services: website, Redmine, FTP and git .</p>
