<b>Target version:</b>	Replicant 6.0	<b>Spent time:</b>	0.00 hour
<b>Resolution:</b>		<b>Grant:</b>	
<b>Device:</b>	Not device specific	<b>Type of work:</b>	Unknown

#### Description

I don't use the script very often, so I'm not sure how long have they been down, but both DNS server use in the script:

```
DNS1="193.183.98.154"
```

```
DNS2="87.98.175.85"
```

Seem to be down. A quick solution for anyone having the same issue (and being driven crazy by it like I was xD) is to change them for some other DNS server IP they might know.

I know googles' 8.8.8.8 and 8.8.4.4 but I'm sure that's a no no for anyone that respects its privacy. Unfortunately those are the only ones I know. So if could suggest a better ones please do.

Thank you.

By the way, when I say to change them I mean simply open the file `usb_networking_device.sh` and changing those values. I'm only clarifying for anyone that might be having this issues like I was. It was really driving me crazy and triggering my OCD

OpenDNS project give IP for DNS servers which can perhaps be useful (<https://en.wikipedia.org/wiki/OpenDNS#DNS>)
