

PortingOnDeviceWithLowRAM

Links

- <https://source.android.com/devices/tech/perf/low-ram> : The official Android documentation has some information on some possible optimizations
- <https://source.android.com/devices/tech/debug/scudo> : Using jemalloc instead of scudo might save some RAM: "Starting in the Android 11 release, scudo is used for all native code (except on low-memory devices, where jemalloc is still used)."
